

FRAMEWORK EVOLUTION ON LVIS AND COCO

FALSE-POSITIVE AND UNCERTAINTY ANALYSIS PATHWAY

Final Evaluation

Metrics used:
image-level category recall
pair-level recall
AP50-proxy diagnostic metric

RQ1 Results:
LVIS AP50-proxy gain
+0.0344

RQ1 Results:
COCO AP50-proxy gain
+0.0692

RQ1 Results:
Rare-category AP50
gain +0.0238

Main finding:
Multi-prompt semantic evidence improves recall,
while uncertainty and conflict analysis help
characterize false-positive behaviour.
